

# Wingfield Village

Steiner Development, Inc.

Boise, Idaho

895 - 1,039 sq. ft. plans

Wingfield Village combines single family houses, townhouses, and apartments in one diverse community. The site plan features guest circulation on tree-lined streets separate from the garage areas that are accessed from rear lanes. The apartments are arranged in one, two, six, and ten-unit two-story building configurations. They offer four floor plans with accessible first floor plans on the garage level. The largest end unit has two master suites, separated by the common areas, living, dining and kitchen. The other three plans have a master suite plus an additional bedroom and bath. All master suites have walk-in closets. Living room fireplaces, laundry areas, one-car garages, and covered decks are included on all plans. The variety of the building forms, some including carriage units over garages, creates a more interesting and livable community.
